SUMMARY

Flutter Developer with 1+ years of experience shipping cross-platform apps for Android and iOS using Flutter, Dart, Supabase, Firebase, and REST APIs. Published two production apps on the **Google Play Store and Apple App Store**, spanning professional networking, e-commerce, real-time chat, AI-powered analysis, and 3D educational content.

Skilled in real-time communication (ZegoCloud, sockets), **in-app purchases and subscription flows**, payments, and deep linking. Build scalable, maintainable apps with Bloc, RxDart, and Clean Architecture, and optimize performance through caching and async processing.

Own features end-to-end, from UI to backend integration, and eager to bring fast-growing expertise to a collaborative engineering team.

EXPERIENCE

Flutter Developer (Rev9 Solutions) *11/2025 – Present*

Jhelum, Punjab

- Developed and maintained mobile application features using Flutter and Dart, building responsive and reusable UI components on a scalable architecture
- Collaborated with cross-functional teams on feature development, API integration, testing, and application enhancements
- Implemented business logic and managed asynchronous operations, resolving frontend and integration issues to improve application performance, reliability, and overall user experience

Flutter Intern (Rev9 Solutions) *08/2025 – 10/2025*

Jhelum, Punjab

- Developed cross-platform mobile applications using Flutter and Dart for Android and iOS, integrating APIs and backend services with Dio and Supabase for authentication, storage, and dynamic content
- Implemented real-time features including push notifications via FCM, Supabase Edge Functions, and voice/video calling using ZegoCloud
- Built responsive UI components with animations and custom widgets; managed state using Streams and Bloc with Clean Architecture
- Optimized performance through caching, asynchronous operations, and network improvements

PROJECTS

Pantsuit Professionals (PSP)

- Built and maintained a cross-platform professional networking app in Flutter, integrating secure authentication (email/OTP + Google/Facebook/Apple OAuth)
- Implemented deep linking for membership, payment, and content flows, and integrated payment gateways for in-app membership and subscription transactions
- Added Firebase in-app notifications to drive user engagement, and integrated Firebase Analytics and Google Analytics for user behavior tracking and product insights
- Delivered content publishing (jobs/events/articles) and legal/compliance features (privacy, accessibility, cookie policy, and user data controls)
- Collaborated with backend teams on API contracts and mobile-web parity

CNP Lottio

- Developed the Lottio mobile application from scratch using Flutter, implementing a dynamic system for sortitions, play validations, ticket creation, and full ticket lifecycle management (create, delete, duplicate, and monitoring)
- Added prepaid bill payments, extending the app's transaction capabilities alongside existing payment workflows
- Built seamless synchronization with the web platform through real-time API integration, including payment workflows and data updates
- Designed and structured core application architecture and business logic to support scalable operations across multiple modules
- Improved system stability, performance, and user experience through debugging, optimization, and continuous enhancements

Color Match (Agile Styling)

- Integrated RevenueCat for in-app purchases and subscriptions (Silver/Gold/Platinum/Diamond tiers, monthly–annual) and consumable match packs, along with coupon and referral discounts
- Added Firebase Cloud Messaging, local notifications, deep-link referrals
- Delivered photo-based matching, in-store browsing with overlay match UI, and account/plan management

Mirror Me

- Built a Flutter-based AI-powered mobile app that analyzes facial features through facial scanning to evaluate grooming and appearance
- Used AI to inspect facial structure, provide percentage-based ratings, and suggest personalized grooming improvements, including a visual preview of enhancement results

Bio-View

- Developed a cross-platform educational app using Flutter and Dart for interactive human anatomy learning, integrating Unity to display 3D anatomical models with labels, descriptions, and dissection functionality
- Implemented QR code scanning and image recognition to retrieve and display corresponding 3D models from the database
- Managed authentication and data storage with Supabase, optimizing performance using image caching and asynchronous operations

Wardrobe Chat

- Built a cross-platform clothing e-commerce app with user authentication, product browsing, detailed product views, and dynamic cart management
- Integrated Dio for API communication and Supabase for backend services, including order management and real-time chat with Google Maps locations, voice/video calls via ZegoCloud, and WhatsApp-style attachments
- Managed state using Bloc and Streams; integrated FCM notifications with Supabase Edge Functions for real-time updates

EDUCATION

Riphah International University, Lahore, Punjab
Bachelor of Science in Computer Science

Army Public School and College, Jhelum, Punjab
Intermediate in Pre-Engineering

SKILLS

Languages & Frameworks: Dart, Flutter, Bloc, Streams, RxDart

Backend & Integration: REST API, Firebase, Supabase, Dio, ZegoCloud

Analytics & Notifications: Firebase Analytics, Google Analytics, Firebase Cloud Messaging (FCM), Deep Linking

Payments & Auth: RevenueCat (IAP/Subscriptions), Google Sign-In, Sign in with Apple, Payment Gateways, StoreKit, Google Play Billing Library

Tools & Practices: Jira, Slack, Clean Architecture, Performance Optimization
